Amendments to the Specification:

Please replace paragraph 28 with the following rewritten paragraph:

[0028] Indeed, a module of executable code could be a single instruction, or many instructions, and may even be distributed over several different code segments, among different programs, and across several memory devices. Similarly, operational data may be identified and illustrated herein within modules, and may be embodied in any suitable form and organized within any suitable type of data structure. The operational data may be collected as a single data set, or may be distributed over different locations including over different storage devices, ~~and may exist, at least partially, merely as electronic signals on a system or network~~.

Please replace paragraph 34 with the following rewritten paragraph:

[0034] Figure 2 is a schematic block diagram illustrating one embodiment of the system 100. Shown herein are the primary site server 102, and the target site server 104. In one embodiment, the primary site server 102 may comprise a production volume 202, and a task controller 204. The production volume 202 may be configured as a plurality of storage disks formed in a redundant array of inexpensive disks (RAID). Alternatively, the production volume 202 may comprise any computer readable storage medium including, but not limited to, tape drives, random access memory, read only memory, and optical disks.
